

# DISPLAY INSTALLATION PROCESS

Small and reliable computer is securely fastened under the table and did not require any maintenance or expert supervision

Easy "out of the box" ready installation on Roulette or cards gaming table. The Camera is easily set up again through the user interface.

The screen is housed in a gloss shiny plastic case, which allows 180 degree rotation, and easy Up/Down adjustment. The Display can be attached to the edge of roulette table or into the table surface.

USB WEB camera fast recognition system - eye adjustment takes just 1 minute!

There is no need to invite an engineer. A reading eye is the simple USB-web camera, which you can buy in any shop (in case of breakage).

The second advantage of our display is that the camera could be installed separately from the Display and the wheel. It allows easy up/down adjustment. The display and the wheel can be freely rotate about it axis. All mentioned above allows you to install the display to the roulette table corner, in its best point.

The CMS on display camera is designed to monitor the game status of almost any roulette wheel.

It is detecting the start of each game, the speed and direction of the ball and rotor, the point at which 'no more bets' has been reached, and the winning number. It can also detect changes to the speed and direction of the wheel.
